## Collins-Turner Church Wedding

At St. Mary's church in Flint on Feb. 10, Miss Marion Collins of Flint and Garfield Turner of Cass City repeated their marriage vows. About 75 guests were present when Rev. Fr. Soest, pastor of St. Mary's, performed the double ring ceremony at 9:30 a. m.

The bride, who is the daughter of Mr. and Mrs. George Collins, of Flint, wore a white satin bridal gown with a sweetheart neckline of lace, leg-of-mutton sleeves and a train with three lace inserts. Her veil was held in place by a beaded crown. She carried a powder puff bouquet of pink roses and white sweet peas and wore a gold cross and chain, a gift of the groom.

The bridegroom's sister, Miss Marjorie Turner, of Saginaw, was the maid of honor. She wore a blue taffeta gown and a small blue hat trimmed with blue velvet. Her colonial bouquet contained yellow roses and white lilies.

The groom, who is the son of Mr. and Mrs. Henry Turner of Cass City, was attended by the bride's cousin, Dan Hennessey, of Cass City. James Collins, her brother, seated the guests.

A reception for about 150 guests was given at the home of the bride's parents in Flint.

## Dads and Chums Had Delightful Evening of Fun

Army and Navy Groups Compete in Contests on Lincoln's Birthday

Dads and chums at the February gathering of the Community club at the school gym Monday night were divided into two groups—Army and Navy—for a series of contests. Admiral M. B. Auten and Vice Admiral Willis Campbell led the Navy group, while General Hugh Munro and Lt. Gen. Keith McConkey superintended the Army contingent. After a series of group contests in which both dads and the younger generation participated, the score was a tie between Army and Navy. A representative of each group was then pitted against each other in basketball throws in which the Navy man was the winner and sent that group's score to first place for the evening. "It was lots of fun and different," was the prevailing comment when the evening program closed.

The stunt program was preceded by a fine chicken dinner served by the Commercial club of the school. Red, white and blue table decorations were in keeping with the national holiday—Lincoln's birthday—and favor receptacles were in the same colors. There was chicken galore with ample supplies of other delectable food. About three hundred enjoyed the dinner.

## Church Conference Disappointing Only in Attendance

Town and Country Church Program Here Had Capable Leaders

About fifteen churches were represented in the registered attendance at the conference on the town and country church program sponsored by the five Protestant churches of Cass City at the Methodist church Tuesday, Feb. 13. Sixty persons from Saginaw, Caro, Fostoria, Uby, Pigeon, Fairgrove and Deckerville were enrolled in the conference.

Out-of-town registrants equaled or even exceeded the local attendance. Several other county, district and local church meetings interfered somewhat with attendance at the conference.

The meetings, which began with registration at 9:30 a. m. and ended with an evening session, including worship periods, a panel discussion, a symposium in which local leaders participated, and commission groups directed by speakers sent by the Michigan Council of Churches and Christian Education.

"Much credit is due to the host church, to Rev. Kenneth Bisbee as general program chairman, and to the ladies who served the splendid meals. No detail for the comfort and enjoyment of those attending and for the success of the conference was spared," said Rev. M. R. Vender, pastor-elect of the community pastors' organization.

Mr. Vender admitted that the pastors were rather disappointed and surprised at the comparatively small local response, "especially," concluded on page 5.

**A POUND OF CURE**... In time of war there is often no cure for a burned-out motor: it cannot be replaced! To prevent overheating and extra wear on the motors on your electric appliances, exercise a drop or two of prevention. Oil the motor on your washer, ironer, etc., regularly, according to the manufacturer's directions. Do not oil "sealed-in" refrigerator units.

**WHO PAYS?**... We are sometimes asked, "Since TVA pays no taxes to the community, comparable to those paid by a privately-financed electric power company, how is the consequent loss of tax revenue made up by the community?" The answer—as many communities have discovered—is that the loss in tax revenue must often be made up by increased town or city taxes. In the case of the TVA, much of the expense is borne by taxpayers all over the United States.

**FRIDAY FISH**... Here is an easy-to-prepare dish recommended by our Home Service Department:

**Halibut Creole**

6 slices halibut, 1/4-inch thick      2 cups strained tomatoes (canned)  
2 tbs. butter      1 bay leaf  
1 small onion      1/2 tsp. cayenne pepper  
1/2 clove garlic

Wash halibut and sprinkle it lightly with salt. Melt the butter in a frying pan, then brown halibut, onion and finely mixed garlic in it. Add the tomato juice, bay leaf and pepper. Bring to steaming point on High, then turn to Simmer for 45 to 60 minutes.

**ROPE STRETCHER**... Before the war, we replaced manila rope at the first suspicion of wear. But now the supply of new rope has been cut off, and rope must be made to last as long as possible. To insure safety, our Research Department has devised methods of comparing the strengths and lives of ropes made from substitute fibers, and tests that indicate the exact condition of used rope.

**NEEDS ALL THE SUGAR BEETS YOU CAN RAISE**

This is the first in a series of advertisements paid for by the Sugar Beet Processors of Michigan, to point out to Michigan farmers the reasons why, at this time, it is both patriotic and profitable to grow Sugar Beets.

The world has never witnessed such a shortage of sugar as now exists. Most of Russia's Beet Sugar factories are reported to have been destroyed. Beet Sugar plants in other countries of Europe have been devastated. Tens of thousands of acres in Europe that otherwise would have been planted to Sugar Beets have not been planted.

Sugar that the United States normally gets from the Philippines has been shut off by the Japanese occupation. The world has been deprived of Java's enormous production.

But with lessened supply—there has been no slackening in demand. The men of our Armed Forces need enormous quantities of sugar. Workers in war production are burning up energy which sugar best supplies. And then we have to send large quantities to our Allies and also to feed the populations of reoccupied countries in Europe.

So Uncle Sam can use—has urgent need for—every ton of Sugar Beets that can be grown in Michigan. Moreover, Sugar Beets are a highly profitable crop for Michigan farmers to grow. This is because Sugar Beets are a cash crop of high value per acre.

Your entire crop is contracted for by the Sugar Beet Processor in your area—even before it is planted.

Sugar Beets are sturdy. They can better withstand adverse weather conditions than any other major cultivated crop.

Sugar Beets are excellent in a crop rotation plan. Because of the good cultural and fertilizing processes they encourage, they increase the yield of following crops.

Moreover Sugar Beets yield a double crop—the beets for sugar, beet pulp and molasses—and the beet tops provide excellent feed for livestock in winter months.

Follow this series. Know for yourself that it will pay you to plant Sugar Beets in 1945. Then decide just how much help you can give Uncle Sam by contracting NOW as many acres of Sugar Beets as you can possibly grow.

## Diabetes Hereditary

The medical profession is now convinced that diabetes is hereditary, according to the Mendelian law, and does not result from improper diet, though high fat diets, says one authority, may induce diabetes in persons predisposed to this disease. ## BOWLING

## City League.

Team standings after fifth week:

	W	L
Starmann	10	5
Ludlow	10	5
Reid	9	6
Parsch	9	6
London	9	6
Czerwiec	8	7
Knoblet	8	7
Dillman	7	8
Kolb	7	8
Willy	7	8
Fritz	7	8
Auten	7	8
McCullough	6	9
Gross	6	9
Juhasz	5	10
Wallace	5	10

What? Starmann's team on top again? Yes, but this time they have company, for the Ludlow team holds a first place tie with them and a few other teams are in striking distance.

Only two bowlers collected enough pins to make the honor list this week and they are Herb Ludlow with a 573 count and Francis Fritz with 552 pins. Both of these captains have done exceptional bowling the past few weeks and are named among the best five bowlers in the league at this date.

Parsch's team carried away the big prize for the week, making it two in a row, while Johnnie Juhasz's team took the smaller prize. Lester Battel tucked away both the individual prizes offered and has greatly improved his average since entering the league. He is a member of the Parsch squad and largely responsible for that team's showing over the past couple of weeks and his team now is but one game out of first place.

Bowlers with scores of 200 and over are Ludlow 225, Deering 222, Gross 215, Greenleaf 205, F. Fritz 204, Battel 203, Novak 202, Champion 200.

The open bowling prize for the week was won by Lester Battel when he hit the maples for a 224 count.

Ten high average bowlers: London 183, Ludlow 174, McCullough 173, Gross 173, F. Fritz 173, Knoblet 171, Reid 170, Parsch 170, Willy 169, M. Auten 168.

## Latest Type Bomb Is Most Powerful

### Air Weapon Smashes Submarine Pens and Dams.

LONDON. — The air ministry announced that the RAF has been breaking dams, sea walls, and submarine pens recently with a new type, 12,000-pound earthquake bomb which it described as "undoubtedly the most destructive air weapon ever used."

The big weapon combines great penetrative power with a terrific blast effect, the air ministry said, adding that "no other bomb used in this war, either by ourselves or by the enemy, has had these two advantages."

"Even the old type 12,000-pound factory buster detonated on the surface and destroyed its target by the blast alone," the ministry observed.

The blast of either one makes that of the Nazi flying bomb look like a toy.

The new bomb is three times the size of the original blockbuster, one of which is known to have destroyed 30 buildings during an attack on Emden. That would mean that under the same conditions the "earthquake" bomb might flatten 100 buildings. Scientists estimate that its blast damage covers an area of approximately 80,000 square yards.

It is streamlined so that it will penetrate into the earth even from moderate altitudes. It carries a delayed action fuse, so that the bomb does not explode until it is inside or under its target. The head contains the heaviest possible charge of "a very powerful explosion."

Its extraordinary penetrative power was shown in recent attacks on the submarine pens at Brest. They were among the strongest shelters ever built by man, with concrete roofs 12 feet thick.

"Four 12,000-pounders hit the roof and drilled their way right through the concrete to explode inside," the air ministry said.

### \$3,392,396 Laid Out

#### On First Superfortress

DAYTON, OHIO.—It cost \$3,392,396.60 to build the first B-29 Superfortress. Headquarters of the air technical service command announced that figure on pointing out that it took 180,928 of the \$25 war bonds to build that first Superfortress. The Superfortresses now are costing approximately \$800,000 each.

Brig. Gen. Kenneth B. Wolfe, ATSC chief of engineering and procurement, used the B-29 as an example of the enormous cost of building a new warplane, and said:

"Into the costs of the first model of any warplane goes all the years of engineering, experiments, tests and changes. The very time it takes costs money and the minimum time from the first design of a new plane to the completion of the first production model is about three years."

General Wolfe said \$84,150 was spent even before the original contract for the Superfort was let. That went for preliminary engineering information. The original contract was for \$1,804,940 but that later was reduced to \$1,674,880 after the government assumed certain flight risks. That did not include government-furnished equipment which cost about \$493,300.

General Wolfe said the B-29 had a minimum of changes before actual production was started but it cost \$85,241 for tests to alter the tail; \$7,500 for enlarging the bomb bay and \$15,600 for new propeller test-

Self-Opening  
Oyster opening is frequently a difficult and dangerous task, both in the home and in the commercial plant. In the postwar world it will only be necessary to add a pill to a glass of water containing an oyster. The pill generates carbon dioxide, causing the oyster to yawn and open up of its own accord.

Soybeans No Menace  
To Soil ImprovementRotation and Proper  
Fertilization Solution

SOYBEANS were defended against the charge of being "a menace to soil improvement" by a group of Purdue university agronomists.

No other crop has had such a spectacular career in America as the soybean, which in little more than a decade has been catapulted into fourth place in value among crops grown for grain or seed in this country. No other crop in history has been so feared by farmers as a potential destroyer of fertility.

Reviewing the results of an eight-year test, these experts drew the following conclusions: "Soybeans are no more soil-depleting in minerals than are corn, alfalfa or some other crops on an equivalent yield basis."

Pointing out that all crops when grown and removed from the land deplete the soil minerals, the agronomists recommend that extra amounts of phosphorus and potash fertilizers be used in any crop rotation that includes soybeans in order to replenish the plant food removed when beans and other grain are sold as a cash crop.

Concerning the danger of soil erosion when soybeans are grown, they declared:

"The problem of erosion with soybeans is much the same as with corn. On rolling land, soybeans should be planted on the contour, preferably drilled solid and should

be followed by a winter grain or cover crop.

"On acid soils, limestone or marl is the prime need of soybeans. Without lime on such soils, fertilizers have little effect. These soils after liming usually gave marked response to phosphorus and potash fertilizer when plowed under for beans."

Considering the total of nitrogen, phosphorus and potash removed in the grain, soybeans are less soil depleting than corn, the agronomists reported.

"In any soil improvement program," they added, "deep-rooted legumes, clovers and alfalfas should always be grown where soybeans are included in the rotation. Extra amounts of fertilizer containing phosphorus and potash should be used in the crop rotation to replenish the plant food removed when beans and other grain are sold as cash crops."

he said, "in view of the comprehensiveness or magnitude of the total program and the caliber of the leaders brought to the conference. A community secures such only about once in ten or more years. It is perhaps consoling to realize that most worthwhile things have had small beginnings or grew out of such."

The concluding session of the conference was held Tuesday evening when Rev. Kearney Kirkby, director of the Department of Christian Education, Michigan Council of Churches and Christian Education, was the speaker.

His address was centered upon the three essentials of a good life as suggested by the poet, Edwin Markham—bread, beauty and brotherhood.

The church has a responsibility for providing bread for the hungry, in both a physical and a spiritual sense, he said. The danger is not in lack of bread but in the misuse of it.

In commenting upon the second essential, Mr. Kirkby pointed out that beauty may be found in human relationships. He suggested that individuals should be sensitive to the beauty which may be found in "the common ordinary things of life."

People must rediscover their neighbors and participate in community activities to achieve brotherhood, the speaker stated, particularly since there are so many current developments, such as the breakdown of the family unit, which tend to draw people apart. In a rural community, the church is the primary welding agency to bring people together. It must have a vision of its purpose and place in the community and must develop leaders, facilities and a cooperative spirit with other agencies.

Inadequate disinfection of such instruments will produce what are classed as "man-made" cases of the animal disease. In many cases the loss through man-made disease can be entirely eliminated.

Rationing at a  
Glance...

The pot of gold at the end of the rainbow—that much-touted state surplus of \$20,000,000 to \$25,000,000 this year in addition to the \$50,000,000 kitty in the state treasury—isn't going to solve the financial problem of Michigan municipalities after all. And other hopefuls are going to be disappointed too.

Such appears to be the prospect at Lansing where the state legislature is in session. Just about everybody has heard of war-time inflation. Lansing has inflation worries also. If there'll be money enough to go around after requests of state agencies have been met, it'll be a first-rate miracle!

Of course, it costs more to operate state institutions and agencies. Current operating needs of state departments and institutions total \$30,000,000 more than anticipated revenues by the state. Despite the inflated income of 1945, the state would run in debt—if the budget wasn't balanced.

The Michigan Education association is asking for an increase of \$21,000,000 in state school aid. Concluded on page 7.

## SLOW DEATH

Following an afternoon in the ring, Bullfighter Sidney Franklin was entertained at the home of an American dowager. Although admiring his skill, the wealthy hostess deplored the cruelty of his profession.

He tried to explain the fine points of the art to her. But she would have none of his explanations. She was horrified that anyone could kill an innocent, helpless bull. For more than an hour she continued in this vein.

"My dear madam," finally interrupted Franklin, who had somehow managed to keep afloat in this torrent of words, "it is true that I have killed a number of bulls in my day, but never to my knowledge have I bored one to death!"

## Iron Rails

Until 1844 there were no plants in the United States which could make "heavy" iron rails although in that year more than 4,000 miles of railroad had already been built. The first production of "heavy" iron rails in this country got under way early in 1844 at the Mt. Savage Rolling Mill in Allegheny County, Maryland, which had been built the year before by the Maryland and New York Iron and Coal company.

## Cleaning Rugs

Use the same cleaning methods for linen rugs as for all-cotton. Linens are very absorbent, take up a great deal of water during any cleaning processes, and should be dried thoroughly. A cotton or linen rug, like any other, will pay you dividends in longer service if you take time to give it proper care. Keep it clean—pamper it, and its good looks will flatter your ability.
