Bacteria In Rumen Factor In Bloat

Cow Ailment Costs $40 Million Yearly

A relationship betwen the number and types of bacteria in the rumen and the degree of bloat in cattle in feedlots has been established in studies by USDA scientists.

In feedlot bloat, streptococci build up on starchy feeds to form slime that traps gas in a cow's rumen. Although less prevalent than pasture bloat, caused by eating legumes, feedlot bloat still contributes substantially to the $40 million yearly loss from this ailment.

There is relationship between number and type of bacteria in cow's rumen and degree of bloat, researchers say.
