PRESIDENT OUTLINES

ANOTHER STEP OF MOBILIZA-TION AND SELECTION OF 625,000 TROOPS.

Task of Passing on Individual Cases in Exemption Left to Local Boards.

Preparation for the mobilization of the first contingent of 625,000 troops of the new National Army advanced another step Monday, when President Wilson promulgated the regulations to govern exemptions from military WOULD BE THRILLING

Local and appeal exemption boards already have been appointed and the issuance of the regulations will permit them to organize immediately and prepare for the concluding phases of the task of getting the men under training for duty in France.

In the order in which they must come, there are three steps in the organization process of the National Army as prescribed by congress. They are registration, selection and exemption. The first step has been carried through, and approximately 10,000-000 men between 21 and 31 years of age have been registered. The regulations issued Monday cover in detail the operation of the third step, going down Seeger St., they noticed a exemption.

Information concerning the second step in the series, however, is still lacking and officials are guarding closely the method by which selection is to be applied.

The exemption regulations announced that the boards will be advised of the selection process la- them. Young, who led the advance ter, although none of the steps pre- guard had an intuition of the animal's scribed except the organization of intentions and sidestepped. Crandell, the boards can be carried on until the who was a little in the rear, attemptselection machinery has furnished ed to do likewise but failed. A claim made by the husband must e accompanied by supporting affidavits signed by the wife and by the head of a family residing in the same

A claim by the wife or a third party nust be accompanied by two supporting affidavits signed by heads of families. Similar rules govern claims on the grounds of other dependents, the dependents or third parties being authoritzed to file claims with supporting affadavits.

In each case the board must be satisfied before it grants exemption or discharge that the dependent or dependents actually are supported mainly Continued on page eight.

IN THE "MOVIES"

H. T. Crandell Attempts to Stop Speeding Heifer, but Animal Gets Best of Encounter.

Harry T. Crandell is well qualified to do thrilling stunts for the "movies" after an exciting incident which happened on South Seeger St. Saturday.

Mr. Crandell, armed with a sack of salts and a bottle of linseed oil as remedies for swine ills, was journeying towards his pig ranch south of Cass City with Harry Young in the latter's automobile. As they were young heifer coming from the direction of the stock yards, and at the suggestion of Mr. Young, both Harrys jumped from the machine and attempted to turn the animal back towards the yards.

The heifer resented the kindly acts of the autoists and made straight for ground. When he did, he stood as an The local boards are directed upon example of what a combination of

LOCAL DEALER GIVES FACTS AND FIGURES ON COAL SITUATION.

More Working Days in Mines, More Cars and More Miners Would Lower Prices.

"Will coal be cheaper?" "Coal dealers are asked this question every day. That's something no one can answer—I don't pretend to," said H. D. Schiedel, manager of the Cass City Lumber and Coal Co. to the Chronicle Thursday.

"Newspapers have been advising it is going to be cheaper," said Mr. Schiedel, "but their arguments and advice are not based on facts and conditions. All coal dealers will admit that soft coal is too high but as to whether or not it will be cheaper is not to be known. One person's guess is as good as another's

"Here are a few things to consider in the coal question. Our nation consumed 1,825,000 tons of soft coal per day last year. It produces, at the present rate, 2,213,000 tons a day. The consumption goes on, on the average, during 300 days a year. The production extended last year over only 230 days. To make production equal consumption this year-because consumption is going to increase about 25,000,000 tons—it is going to be necessary to work the mines at least 259 days. Our nation consumed last year approximately 550,000,000 tons. This includes storage coal over from 1915.

"The questions of the minute are: "Are the mines going to run 259 days? The best they have ever done is 232 days.

"Are the railroads going to be able to furnish cars and motive power? The car supply has not been enough to keep miners working.

"Are the mines to be supplied with State Supt. States 1200 Less Teachmen? In 1916 about 20 per cent of miners sought other fields of $_{

Classes 2 and 6 make their annual pilgrimage to Bay Port Tuesday, weather permitting.

To get as much POWER as Studebaker offers in a Four at \$985, you must pay on the average \$2753. To get as much POWER in a six as the Studebaker Six at \$1250, costs on the average \$4078.

A S a matter of fact, there are very few FOURS on the market that equal the Studebaker Four in Power, just as there are but few Sixes that match in Power the Studebaker Six. And they are all very expensive, as the figures show.

In ratio to power, Studebaker is the most economical car made, because Studebakers are the lightest cars in the world in ratio to their power.

This lightness, together with the enduring strength that characterizes Studebakers, is the evolution of four years' intense study of the performance of hundreds of thousands of Studebakers in actual use under all sorts of service conditions. Let us show you some other points of Studebaker value. You owe it to yourself to know them before you buy.

> Studebaker Value may only be judged by comparing Studebakers with cars costing many hundreds of dollars more.

THE AMATEUR GARDENER

Is the Man lost in the Jungle? Sh-h That is no Jungle; that is the Man's Garden and he is looking for the Radishes. Will he find Them? No chance! The neighbors' chickens Dug Up the seeds Fifteen Minutes after he planted them. Well, anyway, the Weed Crop is a Grand Success.

SCRATCHED BY A CAT?

Well, That Wasn't the Story the Man Told About His Face.

The man next to the front door in the street car had strips of court plaster prisscrossed on his face, and it looked to everybody as if he had been in battle. After a time the man next to him timidly inquired:

"You have suffered an accident?" "No; it wasn't exactly an accident," was the reply.

"Perhaps you took the family cat up in your lap, and she suddenly clawed

"No; the cat didn't claw me." "I didn't know but what your cat was a vicious animal."

"No; she is sweet and good tempered." "But your face has been mightily

scratched," protested the inquirer. "Yes; it has been badly scratched, but don't blame the innocent cat. It was a different animal altogether. I called upon a widow. I loved her. I proposed marriage to her. She refused me. I would not take no for an antwer. I said I would never leave her house until she promised to be mine. I had read that that was the way to handle a widow."

"And did you find it so?" was asked. "I did not, as the scratches bear testimon. No; it wasn't the cat's claws, but it was the widow's finger nails that furrowed my face. That's all, my friend, except that instead of proposing again, as I intended to do, I got outdoors and lost my love for her at a 2:40 gait."—Exchange.

Pleasant Thoughts.

The pleasantest things in the world are pleasant thoughts, and the greatest art in life is to have as many of them as possible.—Bovee.

clothes is missing. Was any of it left out of doors overnight? Bessie (aged six) - Jane isn't to blame, mamma. I know where it is. Papa's got it.

Mother--What do you mean, child? Bessie-I heard some of the folks next door sayin' this morning they saw papa with three sheets in the wind .-Boston Transcript.

Didn't Stop Her.

Two rather tough citizens of lower New York had been cruising in a launch in the North river when they were struck by a squall which started them drifting toward a dock at the rate of about fifteen knots. Frantic after unsuccessful efforts to start the en-Mrs. Turner will spend three gine; the man at the wheel yelled to

"T'ROW HER OVERBOARD,"

his companion up forward, "Hey, t'row dat anchor overboard; if yuh don't we'll hit dat dock."

Hurling bags and bundles piled on top the anchor right and left, the man at the bow finally pulled up the anchor, but yelled back that there was no rope attached to it.

"Dat don't make no difference. T'row her overboard anyway."

Reciting the story later, the man who was in the bow said, "So I t'row her, and, gee, we did hit dat dock."-Wash-

The Minor Poets.

The late Jack London had a hatred of the minor poets, a species that of late years has increased enormously in

"Minor poets," London said one day, "are likely to be vain and jealous and nasty. I once sat between two minor poets at a dinner.

"'I saw your villanelle in the Blank Magazine,' said the first, as they were

discussing the soup. "'Did you?' said the other, with assumed indifference.

"'Yes, and I heard a neat compliment paid to it, too, by a young lady. "'What did she say?"

"The first minor poet laughed, and there was a note of triumph in his

"'Why,' he answered, 'she wanted to know if I had written it."-Exchange.

Why the Trunk Was Slow. "I had a most delightful time last summer," gushed Miss Nolling, "but I was dreadfully inconvenienced at Leaflandville waiting for my trunk. I went there by the N. T. C. so as to take advantage of the scenery along the route, but I had to send my trunk

on the slow B. C. and E." "But why couldn't you have sent your trunk on the N. T. C. too?" murmured Miss Sterling.

"Because," explained Miss Nolling, glad to show her superior knowledge, "I learned from a friend of mine that the N. T. C. is not a trunk line."

Me KITCHEN **GUPBOARD**

SOFT DESSERTS.

OFFEE TAPIOCA.-Stir into two cupfuls and a half of strong, clear coffee half a cupful of any instant tapioca and half a cupful of sugar. Stir constantly until it begins to thicken; then add half a cupful of thick cream and cook about fifteen minutes. Remove from the fire, chill and eat with sweetened whipped cream flavored with vanilla. Chopped nuts may be added just before chilling if desired.

Custard Souffle.—For custard souffle make a white sauce, using three tablespoonfuls of sugar to sweeten. Stir in the well beaten volks of six eggs and set away to cool: then fold in the stiffened whites and bake in cups or paper cases for half an hour in a moderate oven. Serve with creamy sauce, which is made as follows: Beat three tablespoonfuls of butter and six tablespoonfuls of sugar to a cream. Add two tablespoonfuls of wine and two tablespoonfuls of cream, beating vigorously. Just before serving warm the mixture ver hot water.

Jelly Roll Meringue.—This is an excellent and quickly prepared dessert and may be utilized for either luncheon or dinner. Cut the jelly roll left from Sunday's supper into meat slices. arrange in a buttered pan and heap on top of each slice two tablespoonfuls of meringue made from the stiffly whipped whites of two eggs, a tablespoonful and a half of powdered sugar and two teaspoonfuls of chopped candied lemon peel. Set cake meringues in a very moderate oven until delicately tinged with brown. This oven must be slow or the meringue will toughen. Serve cold with custard sauce.

Custard Dessert.—Make a plain custard of milk, yolk of an egg (more if you wish), cornstarch, sugar and flavor on ice. When ready to serve turn into very stiff, add a tablespoonful or more of apple jelly and beat with eggbeater until very light. Serve on custard with tiny squares of any jelly. This is a very pretty dessert and tastes just as good as it looks.

Fruit For Spring

RUIT PUNCH FOR TWENTY-FIVE PERSONS.-Four cupfuls sugar, eight cupfuls water, two quarts mineral water, a shredded pineapple, a cupful fruit juice, a box straw berries hulled and cut in pieces, three bananas cut in slices, juice of six oranges, juice of three lemons. Boil sugar and water five minutes. Add fruit, juice, mineral water and water to make punch of proper strength. A cupful maraschino cherries may be added.

Fruit Salad.—Four oranges, a grapefruit, two sliced preserved pineapples, four eating apples, sugar to taste. Cut all the ingredients in small pieces, dip the apple in lemon juice and it will remain white. If the oranges are very sweet use the juice of two lemons. Stir all together and let stand until the juices are well blended before chilling. Serve in sherbet glasses either as a dessert or first course for dinner.

Orange and Lemon Marmalade.-Remove peel from eight oranges and four lemons and cook until soft in enough water to cover. Drain and scrape white part from rind with a spoon. Cut thin yellow rind in strips with scissors. Divide oranges in sections, remove seeds and tough skin and put them in a preserving kettle. Heat gradually to boiling point, add four pounds of sugar gradually and cook very slowly over a low flame one hour. Add the rind and cook one hour longer. Turn into glasses.

Lemon Snowballs.—Beat three egg yolks with a cupful of water till very light, add three tablespoonfuls of water and the grated rind of half a lemon. Then stir in a cupful of flour sifted with a teaspoonful of baking powder. Fold in the stiffly whipped whites of the eggs. Butter small cups and fill with the mixture. Steam for an hour, then turn out and sift powdered sugar over the puddings.

Fruit Cocktail.—Half cupful pineapple, one-half cupful banana, one cupful grapefruit, one-half cupful orange, onehalf cupful Malaga grapes, a few maraschino cherries, one tablespoonful preserved ginger, chopped; one-third cupful sherry, one cupful sugar and pinch of salt. After cutting fruits into small pieces, combine with dressing made by mixing sugar, salt and sherry together. Chill thoroughly, and just before serving garnish with cherries.

Huna Thompson.

The Sobbing Bride. "I expected it would come to this!" sobbed the bride whose honeymoon could not yet be said to be over. "I expected it, but, oh, not so soon!"

"Has your husband been abusing you already?"

"Yes. He says I want my own way all the time."

"And he is determined not to let you have it?"

"Oh, that's the worst of it. He says he d-doesn't care if I have my own way, but that h-h-he w-wants me to make up my m-m-mind what my own way is! Boohoo! That he should ever be so unfeeling!"-Cleveland Plain

Stage Steeds.

The steed is always a difficulty in staging "Don Quixote." At the Theatre de la Gaiete, in Paris, the Rosinante in Massenet's opera grew so fat under the light work and good food that it was found-necessary to "paint protruding ribs on his painfully rotund sides ev-

ery night." Irving's difficulty in London was in the other direction. He had engaged a peculiarly decrepit animal, the property of a baker, for the part, but on the morning of the rehearsal be found that it had been taken by an officer of the S. P. C. A. to Bow street, where the magistrate ordered it to be killed .-London Mail.

A Hill as a Palace.

"The only building in Lassa, Tibet, that is at all imposing is the Potala," writes Edmund Candler. "It is not a palace on a hill, but a hill that is also a palace. Its massive walls, its terraces and bastions stretch upward from the plain to the crest, as if the great bluff rock were merely a foundation stone planted there."

When one thinks of the great events that have taken place in the Holy Land, the multitude of cities, villages and towns, the countless millions who have been born there and whose bones now lie in its rock ribbed hills, the small dimensions of Palestine are almost startling. West of the Jordan, where most of the historic events took place, there are only 3,800 square miles, including all the geographical divisions now called Palestine. Including the land both east and west of the Jordan, the total area is, 9.840 square miles. The length of Palestine from north to south is about 150 miles. It varies in breadth from twenty-three to eighty miles.

The Japanese Juggler.

A man who has traveled in Japan says of the feats of a native juggler: "He took an ordinary boy's top and spun it in the air, then threw the end of the string back toward it with such accuracy that it was caught up and wound itself all ready for the second cast. By the time it had done this it had reached his hand and was ready for another spin." The paper butterflies he made by help of a fan to alight wherever he wished. The spectator requested that one might be made to settle on each ear of the juggler. "Gentle undulations of the fan waved them slowly to the required point and there left them comfortably settled"

How to Kill the Rats.

"A highly recommended remedy for rats in poultry houses," says a writer in Farm and Fireside, "is poisoning with a mixture of two parts cornmeal and one part sugar of lead. Make sure that the hands do not come in contact with the poisoned feed, and also have the poisoned feed out of the reach of the chickens by putting the poisoned meal in the center of a tight box large enough so that chickens cannot reach it through the inch and a half holes made in the sides of the box so that the rats can enter it."

Just a Party.

"I was ashamed of my husband once in London," said Mrs. John W. Gates. "Among our tourist stunts was a visit to Mme. Tussaud's waxworks. One of our friends asked us how we liked it, and my husband replied, 'Well, it impressed me as very much like any other English party.' "-Woman's Home Com-

SILOS ARE AID TO FOOD CONSERVATION

Erection of Them on Every Farm, State College Says, Would Mean Big Saving.

The erection of silos upon farms where these structures have not already been built, is endorsed by the Michigan Agricultural college as a method whereby the corn crop can be made to go farther than would otherwise be the case.

"The advantages of the silo over the ordinary method of shocking and husking corn are numerous," the farm crops men say. A few may be mentioned

Silage furnishes succulent feed throughout the winter.

It reduces the area required for pas-

It provides the cheapest possible means of supplementing pasture in a dry season, and thus maintains the

Silage is eaten without any waste, even when made from large coarse stalks. Only 63 per cent of the total digestible nutrients of the corn crop is found in the grain. The other 37 per cent is in the stalks, and all of it is lost on many farms, and on others, even under the best methods of handling stalks, from 20 to 40 per cent of their feeding value is wasted.

The crop is disposed of early in the fall, which permits putting the land into wheat, or at least plowing for spring crops.

The value of an immature corn crop, or one frosted before ripening may be practically doubled by placing it in the silo, as compared with husk-

The crop may be stored in a much smaller space than it could be as dry

The labor required to feed the crop is reduced where it is stored as si-

The livestock-carrying capacity of a farm can be materially increased by the use of the silo. A given area of corn in sections where corn is successfully grown, when placed in the silo far to attend all the meetings. will furnish feed for a larger number of stock than will any other crop that can be produced on the same area. To keep more livestock on each acre, or reduce the number of acres required to maintain the stock already on hand is the key to successful farming, and the more extensive use of the silo will provide the opportunity.

STOP FEEDING TRAMPS UNLESS THEY EARN MEALS

This Is the Advice Given by Member of the War Preparedness Board.

Stop feeding tramps.

wives and others by a member of the War Preparedness Board. He believes that if it were observed to the fullest degree by those who habitually give handouts. that there would be two big gains in state efficiency for war: ablebodied floaters would be forced to work for a living and thus would help to solve the labor problem; and the food supply will be conserved.

"At this time, when everybody is trying, or should be trying to help the country's cause in the war," he said, "it is unfair that anyone should exist in selfish idleness.

"Make the idling loafer, if he is fed at all, give a rigorous return in labor for the food passed out to him. In practically every case where a man professes to be unable to find work, refer him to the chief of police, the sheriff or other public official. There are plenty of jobs for every idle man.

"There are plenty strong, husky men, wandering through the country begging. Some of them claim they cannot get employment. If they are sincere in desiring it, they can be accommodated; if they are not sincere an embargo on all such charity will result in driving them out of the state or into some useful employment.

"The establishment of some sort of public labor at every county and city jail would also help to discourage the nomad who will not work."

Bold Court Jesters.

"You are ready enough to point your satire at other people's faults," Queen Bess once said to Clod, one of the court jesters, "but you never say a word about mine." "Ah." exclaimed Clod, "why should I waste time in reminding your majesty of your faults, seeing that they are in everybody's

Patch, one of Henry VIII.'s fools, once sought permission to demand an egg from every husband who was dissatisfied with his wife. No sooner had the king granted his request than Patch proceeded to demand the first egg from him, saying, "Your grace belongs to the class of husbands on whom I am entitled to make levy."

ALL AROUND THE FARM

GROWING PRIZE CORN.

Champion Corn Club Boy of Kans Tells Story of His Success. ALBERT ROBINSON. Lowemon

One day last winter I was in an agr culture class, The principal, Mr. Row said the topic on corn would be the next assignment. After I returned the assembly room I began to think the trips that were won by corn boy last year. The term was about ha over, and I was going to graduate fro

Albert Robinson, aged sixteen, Lowemont, Leavenworth county, Kan., state champion Corn club

the high school in the spring and did not know whether to join the club at Easton or not because it would be too

So I went home and talked organizing a club among the boys and girls of my home school. We organized and got along very well.

I was elected president of the new organization and called fourteen meetings during the summer.

At one of our meetings we discussed the selection of seed corn. I had selected my seed last fall and knew just what kind of an ear I had. We tested our corn in a tester, the corn making an average of 90 per cent.

When it was nearly corn planting time I selected my acre of ground along the creek bank. The creek overflows this part of the field about twice a year, but I was going to take the

one hour, and we valued our labor at

sprouted, but it was not through the ground. I passed the corn three days Lucas, Fred Nolty, Lyle Zapfe, Mrs. later and found the corn was up. It was not very long in getting large Harold Kolb, Alex Greenleaf, enough to harrow because it was plant-

ed in a sandy soil. After waiting about ten days I went days I went down to my acre with a harrow and Gale, H. D. Patterson, C. R. harrowed the ridges nearly flat. It fook me thirty minutes. I found a good Reagh, Dorothy Tindale, Eva Mudge, took me thirty minutes. I found a good stand and went home very well pleased. In two weeks I went back with my cultivator and plowed my corn about four inches deep. The corn had grown about six inches in the two weeks. It took me one hour and thirty minutes.

In about a week my father told me to give my corn another plowing because he did not want the weeds to get a start if the creek did not flood the corn and lose all my work. I did as he told me. It took one hour. The corn had received several rains in this period of time, which made the corn grow about twelve inches taller.

I did not get back to my corn for about ten days on account of rainy weather. When I did get back I found that the corn had a dark green color and was about two feet tall. The last plowing took me an hour. I was unable to plow there any more until after wheat cutting. The corn was clear, and I did not think it needed any more cultivating, so it did not get any more.

I left the corn alone until October and began husking.

When I got through husking my crop I was anxious to see how much money

I had made during the summer. I found under the expense column 30 cents for listing the first time, 60 cents the second time with planting. 15 cents for harrowing after planting. \$1.15 for cultivating three times, 50 cents for seed, rent \$5, and \$2 for \$9.70. I gathered five bushels of seed and seventy-eight bushels of common corn. The value of seed, \$1.50 per bushel, making the seed worth \$7.50. Common corn being worth 80 cents per bushel, valuing the common corn at \$62.40. The value of both common and seed being \$70. Having \$9.70 expense, making a profit of \$60.30 from my acre of corn.

Quite an Engineer.

In an arbitration case an engineer was thus examined as to his professional experience and capacity, so called: "How long have you been in husking. The expense amounted to the profession?" "Twelve years." "Are you thoroughly acquainted with your work theoretically and practically?" "Yes." "Do you feel competent to undertake large constructions?" "Yes, most certainly." "In what engineering works have you been engaged during the last twelve years?" "The manufacture of iron bedsteads."

Advertise it in a Chronicle liner.

WHY —

You Should Save Surplus Fruits and Vegetables

MAKE your ground work for you and the nation. Idle ground is AKE your ground work for you waste. This is no time for waste or idleness. You can raise some vegetables for your family, no matter how small a

All idle ground utilized in the production of vegetables means more food for those who have no ground at all. If your garden at any time produces

piece of ground you have.

more than you can use immediately do not allow the surplus to spoil. Can surplus beans, peas, corn, toma-

toes, beets, spinach, pumpkin and

squash for winter use. Can or preserve apples, peaches, pears, cherries, quinces, berries and other cultivated and wild fruits.

Every can of vegetables or fruit and every jar of preserved food means that you have saved food materials that would have otherwise been wasted.

Can or store root crops, cabbage and other vegetables properly so that they will keep well and supply you with food when the garden ceases to pro-

The United States department of agriculture, Washington, or your state agricultural college or county agent will give you explicit directions for raising vegetables and will tell you of simple methods for canning vegetables and fruit at home with ordinary home

HOW TO CATCH FLIES.

The Best Fly Trap and the Best Poison Bait.

The best fly trap is a wire screen cylinder with a cone of the same material inside of its lower part, the pointed end up. Beneath the cone is placed the bait in any convenient shallow reception. Why, what on earth are you about tacle. The fly, seeking light, flies up and out of the small end of the cone, One would think you were—looking for thereby entering the cylinder, from the eggshells.' which it can find no escape. "'So I was, ma'am,' responded Jan which it can find no escape.

One can find such traps anywhere for sale. But it is easy to make them, and when homemade they are just as good, while costing only a fraction of

Such traps, of course, should be set where the flies most do congregate—as. for instance, on the sunny side of a building out of the wind. A butcher shop is a great place for a fly trap; it will catch quarts of them in a day.

When the fly trap is full the insects are easily killed by immersing the trap in hot water. Fly paper of the sticky kind is

a first class fly catcher. One does not need to buy it. Take two pounds of rosin and a pint of castor oil. Mix them and heat until the stuff looks like molasses. Smear it while hot with an ordinary paint brush on old newspapers. A dozen sheets of it will cost a

The best poison bait for flies, says the United State bureau of entomology, is made by putting two tablespoonfuls of formalin (obtained at any drug store) into a pint of milk and water, half and half of the two. Put the stuff in saucers in places frequented by flies. A little bread in it helps. But take care that children and animals do not After leaving the ground in this condition for about ten days I decided to plant my corn. My father helped me R. Stewert, Mr. Campbell, Vern Mc-dink it, for it is deadly poison. Keep drink it, for it is deadly poison. Keep dall other liquids out of reach of the Waldon, Luther Souden, Mrs. Chambell, Vern Mc-dink it, for it is deadly poison. Keep drink it, for it is deadly poison. drink it, for it is deadly poison. Keep

WHY CORNS HURT.

Usually Result From Wearing Shoes Too Small For the Feet.

Corns, like corsets, boarding houses and late hours, are a menace to one's sweet disposition.

Corns are hard growths which occur on the toes or some other part of the feet. They are generally the result of wearing a shoe too small for the foot. They are thickenings of the outer ayer of the skin, in the center of which is a nail-like peg, which projects downward and hurts when pressed upon. Soft corns form between the K. Reid, Edna Wood, Johnie Reid, Mr toes and are only different from others Schwaderer, Arthur Helwig, Harold Murphy, C. Charlton, Mrs. A. Smith, Mrs. W. Weldon, Robt. McKenzie, in that they are soaked with perspiration all the time. The corn itself is composed of a lump of the outer part of the skin, which is caused by the pressure of the shoe at that spot. However, the corn would not result unless the pressure were taken off at intervals, and this, of course, is done when you take the shoe off. It stands to reason that if the pressure were continuously applied to this spot the skin, instead of overgrowing at that precise point, would waste away. The vergrowth of the skin is due to the irritation produced by the pressure.

> How to Lubricate a Pocket Knife if It Sticks.

Pocket knives naturally come in close contact with the body, and for this reason they become dry and rusty from the heat and perspiration. Necessarily any lubricant must be of some dry material. A very simple and efficient, as well as cleanly method, is to use a little powdered graphite on the joints, says the Popular Science Monthly. The graphite may be obtained from the lead of a pencil. After applying it work the blades a few times.

How to Make a Convenience Out of

Your Hatbox. It is often necessary to keep a hatbox on a high shelf. In that case the following method is found convenient: Slit the two upright edges of one side of the box so that when the cover is raised this side will drop down as if on hinges. This, of course, allows the hat to be removed without taking the box from the shelf.

HIS QUEER TASTE FOR EGGS.

An Irish Joke and a Startled English

Country Girl. In his book "Omniana" J. F. Fuller, the Irish octogenarian literary light. tells a story of his sister illustrative of the fear of Irishmen that was inspired by the Fenian activities. She was living at the time in London, and he wrote to invite himself on a visit. His sister replied with an appropriate welcome, but added that she had a young English country girl as parlor maid who had never seen an Irishman and day night. who might be seriously disturbed by the encounter. On his arrival Mrs. Hyde summoned the girl:

"'There's an Irishman outside, Jane. Open the hall door. Don't be frightened. Come along, I'll go with you.' "When I was inside and had got through with my brotherly salutation I made indirect overtures to the enemy

by saying, 'I suppose this is your maid.' "'Yes; that's Jane." "'Well, Jane,' I said, 'how do you do?' And I-held out my hand, but she was too scared to take it, and I was obliged to do all the shaking for her.

"Next morning after breakfast I was surprised to see my sister carefully disposing of the eggshells in the fireplace. She answered my questioning

look with a laugh.
"'You just keep quiet, Jim, and you'll have a full explanation presently,' she said.

"I subsided behind the newspaper. Jane entered to remove the breakfast things and when halfway through came to a halt and was evidently a bit bewildered. She, in fact, missed the

"'What's the matter with you, girl?" queried my sister.

' 'The-the-eggs, ma'am,' said Jane, tentatively looking round the table. "'Oh, never mind them,' explained the mistress. 'It's all right.'

"Poor Jane, evidently perturbed, proceeded with her work haltingly, and

promptly.
"'Why, you young goose,' exclaimed my sister, 'don't you know they always eat the shells in Ireland?"

The startled look that broke over Jane's face as she fled from the room was a study for an artist.

Health.

Health is so necessary to all the duties as well as pleasures of life tha the crime of squandering it is equal to the folly.-Johnson.

Evidence They Lacked. "Before Columbus," said the schoolteacher, "what did people think was the shape of the world?"

"They thought the world was flat!" chorused the pupils. "Right-they thought the world was flat. Now, why did they think the

world was flat?" This was a poser, and silence followed. Finally a brilliant pupil raised his hand.

"Well, Otto?" "Becuz in them days they didn't have no school globes to prove it was round." -Cleveland Plain Dealer.

Nab, president of the West Side Amalgamated Bagpipers, "is the gowd key that unlocks a vicious circle. This is hoo it gangs:

"Music ar-r-r rouses emotion. Varra weel. An' emotion ar-r-r-rouses thocht.

"HAE A GO AT THE PIPES."

Varra weel again. Thocht ar-r-rouses action, ye weel ken. An' action brings regret. Regret ar-r-rouses sauvagery. An' sauvagery is soothed by music! "Ha'e a go at the pipes, Wallie!"-Cleveland Plain Dealer.

A Southpaw Winder. "I wish you would tell me what is the matter with my watch," said the girl.

It was her first watch, a birthday present, and as the jeweler took it and deftly wound the stem between the thumb and index finger of his right hand she watched him closely as if it were an operation involving some mys-Perious incantation.

"It seems to be all right," said the jeweler, handing it back to her. "You ought to keep it wound up, though." "It looks very simple when you do

it," replied the girl, "but I could wind it all day and it wouldn't go for me." And then the jeweler saw where the difficulty was. "No wonder," he said, laughing. "I see you are left handed, and instead of winding it up you've been turning the stem the wrong way."

MORE THAN A DOZEN GREAT ATTRACTIONS

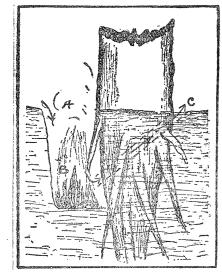

STUMP-BURNING PLANS

Several Have Been Carried Out With Fair Success.

Simple Method Evolved by Professor Ferris of Mississippi-Two-Inch Hole Is Bored Through Stump and Fire Started.

Several plans for the slow burning of stumps have been devised and carried out with a fair measure of success. Professor Sparkle of Seattle, Wash., advocates a system of charpitting by which air is admitted to the fire through a long pipe. Combustion is carried on in the heart of the stump instead of on the outside. A description of the system appeared in these columns about a year ago. It requires some skill to obtain results by this method, as several of our readers wrote saying that they had tried it without satisfactory results. It is better suited for the destruction of the woods of the Pacific coast than for those of the East.

A simpler plan has been evolved by Professor Ferris of Mississippi and as shown in the accompanying diagram, consists of a 2-inch hole bored diagonally through the stump. The upper

Stump-Burning Plan.

end of this hole is at the surface of the ground, the lower end on the opposite side and about 18 inches below the surface. The earth is dug away and a fire started at the lower end. The auger hole serves as a flue and the stump is soon burned out. This plan has been found successful with pine stumps on lighter soils. It will no doubt be found practicable with stumps of other species of trees.

HONEY IS VALUABLE ASSET

No Farm Complete Without Few Colonies of Bees-Movable Frame Hive Is Sufficient.

No farm is complete in its conveniences and business methods without a few colonies of Italian bees comfortably housed in a most convenient hive. Honey is one of the farmer's most valuable assets, and in many places a dozen colonies will gather 75 to 100 gallons of honey during a single season, worth in many places 75 cents a gallon. All the bee wants is a movable frame hive, in which the honey is stored in a convenient manner for the farmer to get at any hour he may wish to have honey and butter.

WASTED LAND ALONG FENCES

Department of Agriculture Reports That Ordinary Rail Barrier Occupies Twelve Feet.

Few farmers stop to think how much land is taken up by the fences. The fence itself takes little room, but it is impossible to grow anything for several feet on both sides of the fence. The department of agriculture reports that the ordinary rail fence occupies a strip over 12 feet wide. About 3,600 feet of such a fence takes up an acre of land. Hedges take up a little more than the rail fence, the width varying according to the width of the hedge

GOATS ARE THRIFTY FEEDERS

Animals Are Easily Raised and Meat Highly Desirable for Food-Little Capital Needed.

Goats are very thrifty feeders. They are easily raised and the meat highly desirable for food. Kids soon reach the age when they may be sold for the market or slaughtered for fresh meat. A few acres of rough land could hardly be used any better than for goats. A small area for pasture crops could be utilized for producing kids for the local market. It would not require much capital to start on a small scale crop may be badly damaged. The blosnor much labor to take care of the animals.

EXCELLENT FEED FOR DAIRY

Peavine Silage Is Very Palatable, Containing More Protein Than That From Corn.

Peavine silage is an excellent feed for dairy cows, being very palatable and containing more protein than corn silage and approximately equaling it in the total nutrients. Because of its strong odor, peavine silage should be fed after rather than before milking | means of the eye assisted by the recto prevent tainting the milk. It may be fed in as large quantities as will be consumed but is more satisfactory when supplied at the rate of about 25 the best means of exercising judgment pounds per cow per day.

BURSTING HEAD OF CABBAGE

Trouble Caused by Rapid Growth and May Be Prevented by Breaking Off Some of Roots.

Many persons growing their own vegetables have experienced considerable annoyance in having a large number of fine heads of cabbage to burst, before the vegetable can be used or marketed.

The bursting is caused by rapid growth, and usually occurs after a varm rain which has followed a dry spell. It is surprising how rapidly the heads will split and push out from the center, which is damaging unless the cabbage is used at once.

To prevent cabbage from bursting, go to each head, and pull it just | + enough to break a large number of the small rootlets, but not enough to allow the head to fall or lean very much to one side. This will, lessen the amount of moisture and food taken into the plant and the development of the head, and consequently the bursting will cease. In most cases the cabbage will remain perfect and unin- 🕴 posts, however, the flag is taken 💠 jured, and can be sold or used before any damage results.

Why Shivering Warms Us Despite the Cold.

Some might doubt that shivering on a cold day would make any one warm but it is true that spasmodic quivering of the muscles called shivering causes a flow of blood and thereby generates warmth. No one ever shivered until his body is extremely cold. It is a nervous protest on the part of the flesh, due to acute discomfort, that has reached the brain and been reacted But the moment shivering begins the muscles work involuntarily and the body begins to produce heat.

How to Stop a Cramp In Your Leg Instantly.

Only those who have had it know what execuciating torture a cramp in the leg is. When the cramp comes on, instead of rubbing the knotted, hardened muscle, take a long string or garter and wind it around the leg over the place that is affected, then take the end in each hand and give it a sharp pull, one that will cause a little pain. The cramp will instantly depart.

How to Protect the Piano During Damp Weather.

To prevent damp and rust attacking the wires of a piano tack a small bag of unslal'ed lime inside the instrument in building up a profitable dairy herd. I just underneath the cover. This will sult was a cunning little negligee. absorb a"I the moisture.

SMART SUIT.

How Black Taffeta May Be Used to Build Togs.

The spots on this suit are not objectionable — merely satin disks on black taffeta. Knee length Russian blouse coat and a slim skirt, with interesting little dabs of metal thread embroidery lighting up collar, cuffs and sash belt ends, compose it. Please note the quaint cuffs.

HOUSEWIVES' DICTIONARY.

Terms Commonly Used and Not Always Understood.

Casserole.-An earthenware cooking dish, generally covered, sometimes lined with white porcelain finish, especially suited to slow oven cooking; the dish served in a casserole, as a "casserole of lamb."

Hors d'Oeuvres.-Relishes, especially at the beginning of a meal, as celery, olives, anchovies, etc.

Canape.-Always a relish or first course at the beginning of a meal, but consisting of a slice or ring of bread or cracker, on which some piquant, spicy butter or mixture is placed, as ham or caviar, tomato, etc.

Souffle.--Always a hot dish in which egg whites are folded in just previous to haking, making the dish very light generally cooked in outside dish of water, as cheese, prune, corn souffle. Junket.-Sweet milk dish, which has

been solidified by the use of rennet, a digestive extract from the stomach of a sheep or calf. Fry.—To immerse in boiling or hot

fat of several inches depth; rightly used when speaking of doughnuts, frit-Saute.-To cook in very little fat or

in a greased pan; rightly used when speaking of cooking eggplant, steak, mushrooms and other foods which are first browned on one side, then turned on the other, and which are wrongly spoken of as "fried." Macedoine.-A mixture of finely cut

fruits or vegetables molded in jelly. Soy .- A sauce prepared by the Japanese from the seeds of a leguminous plant; brown, flavorful, used to color and season other dishes.

A la Newburg.—The style of serving any food in a rich white sauce to which egg yolks are added, as lobster, mushrooms, etc., a la Newburg.

Conserve .-- A thick, very sweet saute of fruit, as cherry conserve, to be eaten as relish with meat; interchangeable term with "preserve."

Compote. - Stewed fruit, generally whole, in a sweet sirup; as apple, pear or fig compote. Continental term for our popular one of "sauce" when applied to fruits.

"Charlotte."-A dish of fruit or cream filled into a mold lined with cake, generally sponge cake; generally

"Betty."-A dish of fruit and breadcrumbs filled in alternately and baked; generally served hot.

The Handy Girl. There are some girls who have a per-

feet knack of fashioning the daintiest accessories from apparently nothing save a few scraps of material and a yard or two of lace. One of the most fascinating little negligees was made by a clever girl who had on hand an anusually large supply of handkerchiefs. Four of these bits of linen were joined together with strips of lace and an edging was run around the whole thing. An opening was left in the square, where two handkerchiefs met, and lace was sewed on each side instead of joining with one piece. Nile green ribbon was used to tie at the neck and under the arms, and the re-

Mrs. D. McDonald spent Saturday

with Mrs. Robinson of Owendale.

When a Person Faints. The act of what we call fainting, which often accompanies the receipt of good or bad news, is caused by a sudden contraction of the blood vessels,

When the contraction is not violent enough to bring about a fainting spell the person so affected turns white and feels suddenly weak. But when the emotion is overwhelming the person concerned falls down. That is nature's way of trying to adjust the trouble. It is much easier for the blood to flow into the brain when a person is lying down than when sitting or standing, and the moment that the flow of the vital fluid to the head becomes normal

stopping the flow of blood to the brain.

Amazing Vogue of Golf.

the sufferer is restored.

Twenty-five years ago there was as much golf played in the United States as there is baseball played in the central villages of the Fiji islands, which is to say practically none whatever. Yet there are today more than 3,200 golf courses, covering more than 300,-000 acres, inhabited by something like 900,000 players of both sexes from twelve to eighty years of age. In the broad span of sport no one can recall such a development as this in so short a time.-Grantland Rice in New York Tribune.

HIDDEN DANGERS

Nature Gives Timely Warnings That No Cass City Citizen Can Afford to Ignore.

DANGER SIGNAL NO. 1 comes from the kidney secretions. They will warn you when the kidneys are weak. Well kidneys excrete a clear, amber fluid. Disordered kidneys send out a thin, pale and foamy, or a thick, red, ill-smelling urine, full of sediment

and irregular of passage.

DANGER SIGNAL NO. 2 comes from the back. Back pains, dull and heavy, or sharp and acute, suggest weak kidneys and in that case warn you of the danger of dropsy, gravel and Bright's disease. Doan's Kidney Pills are endorsed by thousands.

Here's Cass City proof:
Mrs. Emma Murphy, West Third Sts., Cass City, says: "I am very seldom without a box of Doan's Kidney Pills in our home, for they are the only remedy that gives me quick relief. Once in awhile, I am subject to spells of kidney trouble and my kidneys act irregularly. In a general way feel depressed, but after I have taken Doan's Kidney Pills for a few days, I feel as well as ever. When I run out of this medicine I get more

at Wood's & Co's Drug Store."

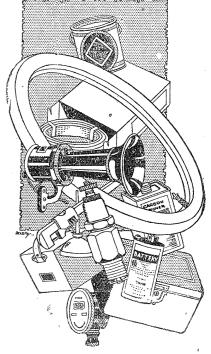

Price 50c, at all dealers. Don't simply ask for a kidney remedy—get Doan's Kidney Pills—the same that Mrs. Murphy uses. Foster-Milburn Co., Props., Buffalo, N. Y.—Adv. 3

Catarrhal Deafness Cannot Be Cured Ustairfial Deatness Lannot be Luired by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure catarrhal deafness, and that is by a constitutional remedy. Catarrhal Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed, Deafness is the result. Unless the inflammation can be reduced and this tube restored to its normal condition, hearing will be destroyed forever. Many cases of deafness are caused by catarrh, which is an inflamed condition of the mucous surfaces. Hall's Catarrh Medicine acts thru the blood on the mucous surfaces of the system. Bystem.

We will give One Hundred Dollars for any case of Catarrhal Deafness that cannot be cured by Hall's Catarrh Medicine. Circulars free. All Druggists, 75c.

How They Invaded a Woman's College.

By PAULINE D. EDWARDS

"I say, Tom," said Jim Ruggles, "what do you say to a visit to the C. A. C. W.?"

"What's the C. A. C. W.?"

"The College For the Amelioration of the Condition of Women." "What kind of college do you call

that?" "The intention is to educate young women on such lines that they may

take the places of men in the higher departments of life-that is, legislators, judges, governors and, possibly, president of the United States."

"You excite my curiosity. I would like to see what kind of material they are molding for the purpose."

"Oh, that isn't what I wish to go there for. I want to see a girl I am sweet on. She has turned me down since she got the feminine craze, and there's nothing for me to do except to beard the lioness in her den."

"But do they allow men visitors at the college?"

"Oh, I understand that the college doors haven't any more objection to men than to women; but, of course, no college for women permits the undergraduates to receive young men whenever they like. We had better go as inspectors of the institution with a view to writing it up, thus advertising it and inducing others to found colleges for a similar purpose. I will palm myself off as a magazine writer. You might tell them that you are principal of a young ladies' seminary and desire to educate your pupils to fill the most exalted positions."

"That's all very well. But do you suppose they're going to be fooled into thinking that a man of my age would be trusted with the education of young

"You can make up for any age you like. Forty will do. Your premature baldness will help, and you can paint a few crow's feet at the corners of your

"Won't they spot the paint?" "Not if it is carefully done, and I

propose to make the visit after dark." A few days later William Hargrave Spencer, the magazine writer, received in reply to a note he had written to the president of the C. A. C. W. an invitation to visit that institution and to bring with him Bryant Wotherspoon for an inspection of the institu-

On a certain evening the two gentlemen, apparently between forty and fifty years of age, appeared at the house of the president of the college and were received by her with consideration, she being greatly interested in getting free advertising for the institution. They had prepared a number of questions, which they asked, and made notes of the replies. After exhausting the subject Tom said:

"As principal of a young ladies' seminary I have found it possible to put not see them. Going to a box of eyemy school in a favorable light to visi- pieces, she was bending over it, untors. On one occasion I turned a visi- mindful of their presence. Tom gave a tor over to a committee of the girls, and the visitor afterward told me of certain irregularities that needed to be and, somewhat ill at ease, told Miss corrected. Since then I have always | Marston that she was showing the turned visitors over to others. May I suggest, without my motive being misconstrued, that Mr. Spencer and I be permitted to be shown over your institution by one or two of your undergraduates?"

The president acquiesced, though not with a good grace in this, and two omer. The professor's presence, with young ladies were assigned to the duty. One of them assumed the lead, acting was not without danger, and Laura did as spokesman and giving a lecture as | not know whether to put on a bold she passed along with the inspectors. | front and enter the dome or wait for She was not a beauty, but was admira- the astronomer's withdrawal. Jim was busy concocting | course. questions that she could not answernor could any one else, for that matter -with a view to getting rid of her. This put her in a bad humor, when Tom said to her:

name of Bertha Griswold in your institution?"

"We have." "She is a graduate of my seminary." "Would you like to see her?"

"I would."

"The young lady went away to call Miss Griswold, and while she was gone there was an animated and hurried dialogue between Tom and the remaining girl. He explained the situation to her and told her that Miss Griswold and Jim had been spoons. Miss Wharton, the girl to whom Tom confessed, declared that she would not be a party to the deception, and the boys were fearful that they were on the eve of dome. exposure, but when the girl who had left them returned with Miss Griswold Miss Wharton held her tongue. Miss Griswold recognized Jim the moment she saw him, but there was no disposition on her part to give him away.

"Laura," said the girl who had brought her, "I will turn these gentlemen over to you to be informed of anything they desire to know."

"I'll do what I can for them," was the demure reply.

The four who remained moved on for the inspection, Jim with Laura Griswold, Tom with Luella Wharton. Pro | They are simply perfect." fessors and undergraduates were there, and there was no opportunity for any

ing. Miss Wharton at hist looked disgruntled at the part she was constrained to play, but a humorous remark on the part of Tom brought a smile to her face, and after that she came to enjoy the prank. As for Laura Griswold, she was disposed to be angry with her lover, but neither wished nor dared to expose him.

But there is nothing like daring to please a woman, and while Laura was explaining what the magazine writer and the principal of a young ladies' seminary came to see both girls were falling in with the spirit of the esca-

"This room," said Miss Griswold, "is intended for the especial use of those undergraduates who are ambitious to sit on the bench.'

"How about a sofa or easy chair?" asked Jim in a low voice.

"Wait. We'll come to that by and by," replied Laura under her breath. "This room," continued Laura, "is occupied by a class that is studying the

onstitutional history of England." She opened the door, and the young men were permitted to look in the room, where they saw a woman professor on a dais lecturing to a number of young women. Between the opening and the shutting of the door these words were heard:

"Up to the time of the accession of George IV. England had been a constitutional monarchy, the sovereign being usually a crackbrained man. Under the contemptible Georges it gradually changed into a virtual republic. But its most glorious half century was under the rule of that greatest of all its sovereigns, a woman, Victoria."

When the door was closed Tom suggested that "now England had got another George it had fallen into a re-

"Not a bit of it," retorted Laura Griswold. "Since Victoria there has been no need of a sovereign. Victoria taught the English people to govern themselves. That's something no man could

"Women are our natural governors," remarked Jim.

The party emerging on to the campus, Jim asked:

"What's that building with a dome

"That's the astronomical observa-

"We must see that, of course," said

"The night being cloudy, no observations can be made. There's no one there to receive us," said Laura.

"Well, now," said Jim, "that's just the reason for our going there. I must have a look at Venus."

"Shut up, Jim," said Tom. "If any of the dons heard that remark the result would be serious."

The party were some time passing over the campus, for they were comparatively free from observation, but the boys hoped for greater privacy in the observatory, so they ascended to the dome. Laura turned on a light, thus giving a view of the telescope. There Jim and Laura went out on to the roof for a conference, leaving the other two where they were.

While the couples were separated Miss Euphemia Marston, the astronomer, seeing a light in the dome of the observatory, mounted the staircase leading to it, and, since a woman's shoes are not usually noisy, she was not heard by the inmates until she had entered the room. Tom and Luella fortunately were sitting in close communion behind the stone pier on which cough, and the professor, straightening up," looked around. Luella advanced telescope to a visitor.

The lady received Tom with courtesy and entered into a long explanation of the different parts of the instrument.

Meanwhile Jim and Laura had heard the conversation in the dome and learned of the approach of the astron-Jim and Laura being out on the roof,

But the astronomer found Tom so appreciative of her explanation of the parts of the telescope and its general uses that she showed no disposition to leave. Then Laura and Tom were hor-"Have you an undergraduate of the rified to see a rift in the clouds and the moon appear. If the astronomer saw the moonlight she would lift the shutter of the dome and make observations.

"I have it," said Jim, and, taking off his coat, he held it against the only window in the dome that the moonlight would shine through.

But his game did not work. Suddenly the shutter was lifted and the dome began to turn.

"I'll have to go down from the outside," said Jim, and, finding a corner, by the help of a water spout and some intervening window ledges he reached the ground. Then Laura went into the

When the party descended and had separated from the astronomer Jim joined them, and since it was getting late they felt constrained to return to the president's quarters. Jim, after thanking the head of the college for the attention he and his friend had been shown, wound up with a flourish in this statement:

"I am glad to say that the young ladies who have shown us over your institution have assured us that there is nothing in its appointments or management that can be improved upon.

The article Jim was to write never appeared. Both the men found wives thing except the parts they were play in the girls who had been their guides. produce a maximum yield.

STRAW SHOULD BE SPREAD.

[National Crop Improvement Service.]
The feeding value of straw being comparatively low, and the fertilizing value being high, all straw should be spread upon the fields and not burned or wasted. The use of straw to prevent winter-killing of wheat is now well established.

THE DAIRY RATION

Feeding Tables Hard to Follow on Account of Variation of Ingredients.

For many years feeders have endeavored to use so-called standard tables showing the theoretical number of pounds each of so-called digestible protein, fats and carbohydrates. These methods are fatally defective for the following reasons:

First, the tables call for so much digestible food. If there was such a thing as digestible food it might fur- day. nish a basis to go by, but digestible the telescope rested, and the lady did | food is really apparently digestible food, in that it disappears in the body. Just what use is made of it is not al- with the former's brother, Clark ways clear. Some of it turns into gas, some is converted into heat, and much of it is used in the labor of digesting and handling the food. In the case funeral of Stephen Mudge at Shabof straw and similar material, nearly all of its energy is used up in the labor of digesting it, leaving little or no net gain. Straw should be reof dried barley grains, each containfood, and one will give twenty more

> One hundred pounds of digestible food derived from roughage is about equal to eighty pounds derived from grain, so if we add together things which are unlike, we get no tangible pounds to so many gallons. So, the digestible basis of figuring rations is very inaccurate. The correct way is, first, to ascertain how much protein and energy a cow needs to sustain life and keep weight. You can get this from your experiment station, and ascertain how much is necessary to make one pound of milk of a certo maintain her and supply food for make.

This is a very difficult problem and few can do it, and we challenge any two men to tackle the same problem under the same conditions and arrive at the same result.

We cannot tell unless we try to find out, that a cow will not give more milk on more feed, or maybe as much milk on less feed. So feeding is largely experimental, as no two cows are alike.

However, the law of averages will hold, and the feeder can save all this trouble and much loss by feeding a ration which his experiment station has in most cases made, say three to four pounds of milk for each pound

of mixed feed. There is one thing certain. The more solids and fat in the milk, the more feed needed per pound of milk. So, a good mixed feed which is properly combined and all the roughage she will eat will greatly simplify your feeding problem and a very little experimenting will soon show you how much concentrates each cow needs to

WHY.

Women Should Drop the Platinum Fad

A MERICAN women have been ask-A ed by the American Chemical society to stop purchasing platinum jewelry because the country's output of high explosives is seriously menaced by the shortage of this metal.

"On behalf of the chemical manufacturers of the country, who are striving to provide our government with it many necessities, and in behalf of those conducting scientific research for the public good," said the society's ciety appeals to the loyal women of the United States to refrain from purchasing platinum in the form of jewelry and to help discourage the use of this metal for ornamental or other unnec essary purposes, so that the limited supply may be made available for use where it can do the greatest good in the service of our beloved country.

"Few realize that the dictators of fashion have caused the price of platinum to advance within the last few years until today it is worth five times as much as gold. As a result of this mood of Dame Fashion the chemical industries of the country are finding supplies they need, while our govern tories is greatly handicapped by its scarcity. Platinum is essential for producing sulphurie acid, which in its turn is an absolute necessity in the production of high explosives.

"The matter has become so serious that scientific and industrial advance ment is suffering severely because of the lack of platinum and the almost prohibitive price to which its scarcity has given rise. It seems a shame especially at this time, that persona! vanity should prove such a handicap to the government and that a mere frivolous fad should deprive chemists and manufacturers of the proper tools for the prosecution of the demands placed

HOME GARDEN HINT.

How to Apply Fertilizers and Lime to

After plowing or working with a spade it is usually desirable to apply some form of fertilizer. Barnyard or stable manure, which furnishes both plant food and humus, is undoubtedly the best, and applications of from twenty to thirty tons to the acre are distributed evenly over the surface and later worked in with a hoe and rake. With his skull crushed, unconscious | Frequently it is advisable also to apply commercial fertilizer, especially phosis usually sufficient. In order to supwood ashes may be distributed over pounds to the acre. Wet, or leached, ashes have less fertilizer value. Two used. In order to start the plants early in the spring applications of a hundred pounds to the acre of nitrate of soda are sometimes used. It is important, however, to remember that no form of commercial fertilizer will yield good results unless the soil is well supplied with humus. This frequently may be furnished in the form of sod or other vegetation which has overgrown a garden spot and may be turned under with a plow or spade.

In certain localities it also is advisable to test the soil for acidity. Naturally moist soils are apt to be sour and in such a condition are not likely to produce the most satisfactory crops. The test for acidity or sourness is a very simple one. A handful of the soil slightly moistened and a piece of blue litinus paper, which can be obtained from any drug store, are all that is necessary. When placed on sour soil the paper will turn red. To correct such a condition lime should be used. The ground should be covered with a thin coat of air\slaked lime and the latter worked in well. Lime is not a plant food, but it will correct the acidity and will improve the physical condition of the soil.

How to Make French Knots on Your Linen Clothes.

To make French knots knot the thread and bring it up through the material; then take an ordinary short backstitch and before bringing the needle entirely out of the material wind the thread two or three times around the needle (according to size of knot desired), and, holding the coils down with the left thumb, draw the needle through. Then insert the needle over the edge of the coils in the same hole, making the knot secure. Carry the thread on the wrong side of the material to the next knot without cutting.

How to Make Violet Water at a Reasonable Price. Artificial oil of violet, 2 drams...... \$.40

The chlorophyl is for coloring the liquid. Unless this is used the water will have a brownish color.

By this formula you will get a quart of good violet water, such as would cost, if bought ready for use, not less than \$4.

POULTRY AND EGGS

INSECT POULTRY PESTS.

To Know Lice and Mite Groups Makes Easier Their Control. Prepared by United States department of

agriculture.] Forty-eight species of lice and mites make up the army of oppression in neglected henneries and poultry houses, which keeps down egg production and reduces the quality of flesh. Forty are lice, of which seven are common on

four are widely distributed. Mites infest fowls by night and suck blood; lice are on the fowls continuously night and day and bite. Because they work at different times-night and day shifts, as it were, and have dissimilar habits-different methods of com-

The poultry house here illustrated is one that was rebuilt from a much inferior one after the owner had joined a poultry club.

bating them must be used. In "Mites 801, the United States department of Wood, the insect parasites of poultrychickens, turkeys, geese, ducks and pigeons-are further classified and remedial measures prescribed which are particularly applicable to the small flocks of the average farm.

ternal parasites of fowls are the common red mite, the scaly leg mite and various lice.

Poultry raisers are all familiar with the common red or gray mite which infests poultry houses. Its presence is indicated by the excrement of the mites on the roosts, which appears as black and white spots like specks of salt and pepper. An examination will reveal masses of these mites in hiding, together with their eggs and the silvery skins cast off by the young. The effects of this pest are shown by decreased egg production and the poor condition of the flesh of fowls. If the infestation is heavy, chickens become droopy and weak, with pale comb and wattles. The sitting hens desert their nests or are found dead on the nest, being killed outright by this sucking parasite. In extreme cases a considerable percentage of the fowls succumb, even though not sitting, and are so weakened as to be very susceptible to various diseases. While this species sometimes becomes very numerous in chicken houses in the northern part of the United States, the shorter breeding season there usually makes it of less importance than in the south, where breeding continues throughout the year breeding continues throughout the year

with little or no interruption. Two species of itch mite attack fowls. One of these is the cause of scaly leg. While this mite commonly remains on the feet, burrowing through the scales and causing their enlargement, it also attacks the comb and the neck. When this infestation is left untreated the feet often become badly distorted, and in some cases the fowl can scarcely walk. Sometimes terminal joints of the toes are lost. As this mite is transferred from one bird to another, fowls with scaly leg should be treated promptly by applying crude petroleum to the legs with a brush or dipping the affected part of the legs

The other itch mite, commonly called the depluming mite, is a very small creature, which burrows into the skin near the base of the feathers. The intense itching sometimes causes the fowls to pull their feathers until they are almost naked. Repeated applications of sulphur ointment should destroy this mite. There are two other species-small,

soft bodied mites. One of these bores into the skin; the other, which has been found in several places in this country, occurs in the air passages, lungs, liver and other internal organs of chickens and turkeys. Serious injury probably is not caused by these mites, except that when they are present in large numbers breathing may be hindered. Still another small species sometimes feeds on the feathers of fowls, but causes no other apparent injury. One species of mite recently has been found in great numbers along the grooves on the under side of the shaft of the wing feathers of turkeys in Texas and Louisiana. Associated with this, but apparently in very small numbers, was a sixth species of mite, but neither caused any apparent injury to the host. Other kinds are found occasionally on various birds as well as domestic fowls, but are of little or no importance as parasites.

PRESIDENT OUTLINES EXEMPTION PROCESS

Continued from first page. by the fruits of the man's mental or

physical labor.

Local boards are required, subject to appeal, to pass upon claims for exemption or discharge within three days after the filing of affidavits.

District boards must decide appeal cases within five days after the closing of proofs and their decisions are nal. If the ruling of a local board is affirmed the person in question stands finally accepted for military

Certificates of exemption will not necessarily be permanent. They may chickens, and eight are mites, of which be revoked with charging conditions or may be granted only for prescribed periods.

In passing on claims for exemption on the ground of employment in necessary industrial and agricultural occupations, the district boards must be convinced that the particular enactually is necessary to the maintenance of the military establishment | ters had been destroyed a pyrometer or national interest during the emerg-

"The evidence must also establish," the regulations say, "even if the particular industrial enterprise or particular agricultural enterprise is found necessary for one of the above purposes. that the continuance of such person therein is necessary to the maintenance thereof and that he cannot be replaced by another person without direct, substantial, material loss and detriment to the adequate and effective operation of the particular industrial enterprise or agricultural enterprise in which he is engaged."

Later the President may from time to time designate certain industries or classes of industries that are necessary and the district boards will be so notified. It will be the duty of each board, however, to ascertain the available labor supply for such indusand Lice on Poultry," farmers' bulletin tries outside the men called for military service and to take the result inagriculture, by F. A Manx Cobbler.

On the Isle of Man-still a primitive place—you find the village cobbler. He has a last for every man, every boy in the place, and centuries before the card index system came into vogue the village cobbler of Man needed only to be told by Shamus that he wanted a pair of boots and he went to the back of his shop and produced the lasts and patterns. Of course, with children, feet would change, and so now and then he remeasured. The village shoeshop in a Man town is apt to be the rallying place of the gossips. It's pleasant to sit and gossip while a man makes a shoe and watch the piece of footwear shaping.

Temperature of Volcanoes.

Scientists have secured an accurate measurement of the temperature of boiling lava in a crater. The experiment was a very dangerous one, and it was considered a triumph of precau tion no lives were sacrificed in making the test. The crater of Kilauea, in Hawaii, was selected for examination. The work progressed very slowly. For terprise affording such employment a long time it was impossible to obtain results, but after several thermome was substituted to advantage. The temperature recorded was 1,010 degrees C., which is the same as 1,850 degrees F. Iron is still unmelted at this heat, but gold, silver and copper melt at a lower temperature.

Forbearance.

"What did the editor say when you got through reading your blank verse composition?"

"Nothing," replied Mr. Penwiggle, "I didn't stop to wake him up."-WashEVIL DEEDS.

Foolish men imagine that because judgment for an evil thing is delayed in this world there is no justice, but an accident alone, here below. Judgment for an evil thing is many times delayed some day or two, some century or two, but it is sure as life, it is sure as death!-Carlyle.

Electricity for Anyone-Anywhere

An open DELCO-LIGHT letter

Vassar, Mich., Feb. 2, 1917

Muellerweiss & Braun, Sebewaing, Michigan

Gentlemen:

I want to write you, telling you how well my wife and I like our Delco-Light plant.

We have used the same about three months and although we liked it from the start, we like it more every day, and would not consider any price for same and go without.

We use only from to 1 to 1½ gallons of gasoline per week and have all the light we want, including lights in the barn, and a light we burn all night, besides doing the washing and pumping all the water we use in the house.

My wife considers Delco-Light the finest addition to our home. In fact we consider our home would not be complete without it.

We are only too glad to recommend Delco-Light to our best friends.

Wishing you success, I remain,

Yours truly, JOHN MAYER, Vassar, Michigan

NOTE: The above letter was written on February 2, so that the test was for the months when most light is needed.

A. MUELLERWEISS, Dealer

SEBEWAING, MICHIGAN
