Studebaker LIGHT-SIX

CLOSED CARS

Present prices are the lowest at which Studebaker Light-Six closed cars have ever been sold.

Yet the intrinsic values are emphatically the greatest Studebaker ever offered. This means they are the best values that the industry affords, because Studebaker cars have always been above par in the amount of value per dollar invested.

Capacity production and the savings resulting from Studebaker methods of complete manufacture make these low prices possible.

Light-Six closed cars are sturdily built of finest materials and best workmanship. The bodies are the product of

Studebaker skill and craftsmanship, and the prices of \$1550 for the Sedan and \$1225 for the Coupe-Roadster are no index to their inherent value.

When you buy a car you want to look at several makes. Include Studebaker in your list and after you have ridden in the Light-Six Sedan or Coupe-Roadster it will not be difficult to make up your mind.

The foundations of Studebaker success are quality, durability, comfort and integrity—principles that have been upheld steadfastly by Studebaker for seventy years. You can depend upon Studebaker automobiles because of the name they bear.

BUSINESS INFLATION TEMPORARY, SAYS BABSON

Continued from first page.
per cent of the people now here from that country. It is practically a tariff on manual labor and on common labor. If continued, it will cause a famine of common labor in this country. It is the reason why the United States Steel Corporation and other concerns are increasing the wages of common labor. If this law continues very much longer it will cause an in-queue in the wages of common labor and thereby tend to bring about a general inflation.
"The tariff bill, which was passed last month, is a second cause of inflation. Whether or not such a tariff is good for the country is a political question and is not for me to discuss."

but all students are agreed that is largely a temporary stimulant. The tariff helps the manufacturer the same as the immigration law helps the wage worker. But neither the tariff nor the immigration law increases production or makes two blades of grass grow where only one grew before. The tariff will cause an increase in the price of goods the same as the immigration law will cause an increase in wages. Increasing prices and increasing wages, however, do not make the country any richer. The country becomes richer only as it has more houses, more bushels, more tons, and more yards of goods. Marking up the price of goods accomplishes nothing. With about a thousand dollars you can today buy a million German marks and become a millionaire, but you are no richer than before.

"The third event that will help bring on the inflation, happened last week when England gave in to Turkey. England has been the one great country outside of America which has stood for law and order; for the payment of debts and sound currency. The lack of France and Italy to back up England on the Turkish matter has shaken the confidence of the world in Europe and European securities. Even some Englishmen themselves are saying, 'What's the use. If no one will back us up we had better let nature take its course.' This means that Europe instead of checking its bad leaders, has given in to them. The Turkish victory is a victory for the inflationists of Europe. The backing down of England is defeat for the sound money interests of the world. This is bound to have an unfortunate effect in this country and cause higher interest rates. The cheaper interest rate period in which we have been entering may temporarily be checked and even money may be scarce for a short time. As the immigration restrictions cause an inflation in wages, and the tariff an inflation in prices, so this Turkish episode may cause an inflation in interest rates.

"These three factors may cause temporary inflation. None of them, however, affect the long swings of business which are determined by fundamental economic law. So far as the long swing goes, we are in a period of deflation which will continue for some years to come. Over the long period of years the tendency of wages, prices, and interest rates will continue downward. However, it is very likely that this tendency has temporarily been checked and we shall probably have all the earmarks of a period of prosperity during the next few months."

General business as reflected by the index of the Babsonchart is at the highest point in over two years. Activity this week is but six per cent below normal as compared with seven per cent below last week and 19 per cent below a year ago.
