Manse Remodeled into Modern House

Some houses are difficult problems when it comes to the job of remodeling them into more convenient residences while in others it seems that a few changes will bring about a vast improvement. The Presbyterian manse on North Seeger St. is in the latter class. Changing the staircase, moving one partition wall, adding two doors and raising the roof of the "wing" has made this residence more convenient, more roomy and has advanced it into the modern

Seed corn, which this year contains a high percentage of moisture will be seriously damaged by early freezes if the corn is not properly stored, according to an announcement by the farm crops department at Michigan State College.

The percentage of moisture in a great deal of Michigan corn runs as high as 45 to 55 per cent. Temperatures of 28 to 30 degrees will ruin such corn for seed purposes if the ears are out of doors, it is said.

High priced equipment is not necessary to care for seed corn properly. An unused room in the house may be utilized, brooder houses make excellent places for drying seed corn, and, in some counties, commercial concerns will dry the corn for small charge per bushel. Michigan farmers who have a good

Think over these reasons why it is to your advantage to buy your coal now.

1. Price is lower now- may be higher during the winter. Easy to secure now—may be hard to get later on.

Enough coal cannot be mined each month in winter to supply each month's demand and the Union coal miners' strike has cut down the usual surplus stock. "Think it over seriously."

Older Proper Kidney Action Is More Than Ever Important.

> AS we grow older, there is apt to be a gradual slowing up of bodily functions. The kidneys are the blood filters. If their action becomes sluggish they do not thoroughly cleanse the blood of poisonous wastes. This tends to make one tired and achy, with often nagging backache, drowsy headaches and dizziness. A common symptom of imperfect kidney action is scanty or burning excretions. Elderly people recommend Doan's Pills. This tested diuretic is endorsed the country over. Ask your neigh-

Gould Soon

Given Liberty

Groesbeck's daring exercise of parole authority during his regime as governor of Michigan was brought home with astonishing force to Lapeer county last Friday by the revelation that E. H. Gould, former road engineer, sentenced in circuit court at Lapeer, June 28, 1926, to from seven to 14 years in Jackson prison, with a recommendation of 10 years, had been at liberty since Sept. 16. The word of Gould's release from prison was brought by an acquaintance who saw him at his home in Ann Arbor.

Gould was convicted of having falsified estimates on eight different roads in the county and of diverting more than \$75,000 from the county road fund. He was found guilty April 29, 1926 and began serving his sentence June 29, 1926. Soon after he was released from prison on bond, pending an appeal to the supreme

The supreme court upheld the lower court, and Gould voluntarily returned to Michigan State prison on December 31, 1926. Gould's sentence was commuted the same day to one year by former Governor Alex J. Groesbeck, it was learned at Michigan state prison.

This commutation, made by Governor Groesbeck on the last day of Groesbeck's administration, permitted his release on Sept. 16. The difference between the time he actually served and the year to which the sentence was commuted is accounted for by prison officials as credit for good behavior.

Attorney T. D. Halpin, of Lapeer, council for the Lapeer county road commission, is reported as saying that Gould can be tried again upon a charge similar to the one on which he was convicted, pointing out that while the original complaint charged misappropriation of funds involving eight county roads, Gould was tried on an information specifying only one road.—North Branch Gazette.

It Pays to Cull Pullets.

You can't use the finger method of culling on pullets which haven't begun to lay, but you can cull out a poultryman's runts and under-developed birds.. The chances are, such chickens will never amount to much, will eat lots of feed but return very little profits. It's good business then, to cull out these under-developed birds from five-months-old pullet flocks; then feed the pullets Chowder and reduce any neck
