# VARE THIS IO gallon test

Here are lower driving costs, far better car performance, for millions of motorists

OTORISTS everywhere are making this amazing test. It may bring you far more satisfactory driving, far lower car up-

keep costs. Here are the facts. Shell has pioneered a great change in gasoline. It has perfected a new, remarkably high

anti-knock fuel. The New Improved Shell 400! In anti-knock value, the quality all cars now need, this gasoline is far above the ordinary type of motor fuel. Yet it is offered you at the same price as the ordinary kind.

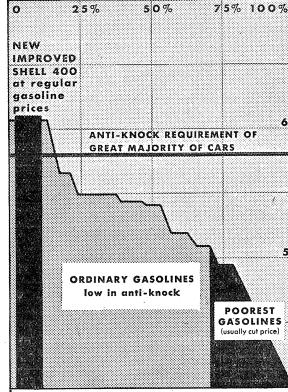

New Improved Shell 400 is Shell's contribu-

tion to the cause of low cost motoring. Shell believes motorists are entitled to the real economy, the great improvement in car operation which this new fuel makes possible. Notice on the chart how much of the ordinary gasoline is below the needs of the modern engine. This fuel was good enough for the

engines of years ago-but not up to the needs of the motors of today! Shell does not ask you to accept its claim of this new, high anti-knock value. It does urge you to try for yourself this fuel developed by

Shell research. Prove the facts, in your own car! Get 10 gallons of New Improved Shell 400. Drive in traffic, on hills, under heavy loads.

Let your own motor decide. Ask your Shell station man about the nationwide mileage test. Enter it, today.

Here are the regular priced gasoline sales charted for anti-knock value. See how most ordinary gasoline falls below the needs of many cars. See for yourself the false economy of cut price gasolines-inferior, if not actually dangerous to your motor. ## Room for Garden in Any Back Yard

Size does not limit a garden's beauty. However small the space or unfavorable the location at the disposal of an earnest gardener, something can be grown there which will give pleas-

The small garden often calls for a greater effort to produce an artistic and attractive result, just as in the furnishing and decoration of a small room in the house, we take more care in each detail of the effect. When successful we are repaid by the small garden, as by the little room, with an intimacy and association not always felt in more spacious surroundings.

Everything is seen closely in the small garden. A single plant or flower becomes the subject of attention rather than the mass of the border. More care must be taken to remove minor imperfections, but there is less for which to care. Color schemes may more easily be handled and close attention to color will be well repaid

Pots, seats and ornaments become of great importance in the small garden. It is important to keep them in scale. An oversize ornament will dwarf the garden; proportion must be carefully considered in every detail

It is not always possible to grow grass in small gardens. But areas

Having surrendered his front yard to purely ornamental purposes, the home owner seeking outdoor comfort, coolness and privacy, turns naturally to the back yard; and it is here the outdoor living room has been developed. The private garden is a room primarily for the owner's enjoyment, and in that essential requirement is to be found the reason why the mod ern style treats lightly questions which have sometimes been thought of great importance; such as the relative merits and fitness of formal and naturalistic planting. An outdoor room, like

## French Style of Architecture Basis for Design of This Small House

By W. A. RADFORD Mr. William A. Radford will answer questions and give advice FREE OF COST on all subjects pertaining to practical home building, for the readers of this paper. On account of his wide experience as editor, author and manufacturer, he is, without doubt, the highest authority on all these sub-jects. Address all inquiries to William A. Radford, No. 407 South Dearborn street, Chicago, Ill., and only inclose two-cent stamp for reply.

It is only in comparatively recent years that the people of this country have discovered the possibilities in home design based on French architectural styles. But now we find many houses, both large and small, in the French style and they are almost always of outstanding attractive appearance. The style is, in general, quite simple with stucco as a commonly used finish.

In the accompanying photograph we see one of these houses, the design of which has been based on the French type. The walls are of roughfinished stucco, practically unoramented except by the well-placed openings for doors and windows. The roof lines are effective and the entrance detail nossesses a charm which can best be described by the word quaint.

Though this home is a small one. measuring but 26 feet by 24 feet on the foundation, its nearly square plan | mittance to the kitchen and the baseand the economy of space in design afford a large amount of interior space. There are six rooms and a sun room, which practically makes it house

to Aid Color Harmony home decorator recently said: "It's almost impossible to make my rooms artistic because of the woodwork. In every decorative scheme I've tried, the woodwork stands out like a sore thumb. What would you ad-

Evidently this home decorator fails to appreciate the adaptability of woodwork. If it doesn't matchchange its color. If, for instance, the color scheme is bright and gav, make the woodwork harmonize. And follow the same rule with a dark decorative scheme. There is nothing easier. On the soft woods and where the scheme calls for a color in the woodwork, paint or enamel will give the desired finish. Nowadays, however, enamels are used more frequently than paint. Enamels come in such lovely colors that they can be mixed safely to secure a variety of tints and shades.

Today, woodwork in the same neutral tone as the background of the walls is decidedly the vogue. Sometimes it is a little lighter, sometimes a little darker. But don't let the woodwork unduly assert itself. Real hardwood finished in its natural color always will be in style; although often it is desirable to stain the wood so as to preserve the grain and at the same time change the color tone. This is not a difficult job. But be sure that good varnish or varnish stains are used. The finish should be waterproof-one that can be cleaned without harming its luster or durabil-

## Mats in Soft Tones Are

Now Popular in Home

It is now fashionable to use mats in soft tones instead of the familiar dead white type when framing some pictures. The mats may be ivory, gray or gold as well as delicate pastel tints, and they are generally used with narrow molding frames. For color prints the frames are often toned with color to harmonize with the pic-

reguire.

When buying or building a home many people overlook the importance of window frames and regret it later. The window frame is the outside enclosure of the window opening.

Simply, it consists of a sill, two outside side casings, an outside head casing with water drip and cap molding, two inside pulley stiles against which the sash slides and a head jamb or inside top that the upper sash meets.

Windows let the outside cheerfulness in—the air and sunshine. Homes without windows would be dungeons. If windows stick and cannot be openedthe fresh air is kept out. If the pulleys screech they become a constant annoyance.

Window frames must do their part to keep out the rains and winds in stormy weather. They must be constructed in a weather-tight manner and the sash must fit snugly.

You never know when you will have frame trouble. When it comes, it seems like tearing the house down to repair window frames. It is serious enough, for instance, to wire for electricity after the home is built, but wires can be fished through. To replace frame units means having gaping holes in place of windows. It is mighty expensive and very uncomfortable. That is when people realize the

importance of window frames. The best standard frames have special features such as double shoulders on the sill which keep out wind and rain. A groove under the sill will prevent water running back into the building. A rabbeted joint and a water groove in the head casing cap will prevent air and water leakage there.

These points seem small but they are big in real home comfort.

## Built-In Closets

Built-in medicine chests give to the walls of the bathroom a pleasing and uniform appearance. Finished in nickel silver with many attractive designs on the mirror, these chests have an appeal to many differing tastes, and suit all color schemes.

Why Called Desert Island

Mount Desert island, lying off the eastern coast of Maine, was discovered in the fall of 1604 by Samuel de Champlain while exploring the Acadia coast from St. Croix westward.
